TAYGETEAN PLEIADIAN CIVILIZATION (PART 1) - EXTRATERRESTRIAL LIFE (17)
Published 24 March 2019 by Cosmic Agency, Gosia

Gosia: Good afternoon Swaruu! You know what I would love to talk about now? About your life in Taygeta, your society and how you do things. I think it will be fun and important to learn more about your every day life. When the time comes when we open our society to the intergallactic co-existence, we will be more prepared and we will know what to expect.

Swaruu: Hello Gosia, I agree. Anything you want, just ask. I am here for you.

Gosia: Ok, great thank you! Let´s start with your planets. How many planets are there in Taygeta in total?

Swaruu: 4 Planets. 3 M type one P type planet.

Gosia: What´s that? M type and P type?

Swaruu: M type planet temperature is 0°c to 50°c average. P class planet temperature is in average from -50° to 0° C.

Gosia: Ok. So it´s a planet Temmer, Erra, what else? And which one is a P type?

Swaruu: D'akotee. The furthest from Taygeta the sun. P class, cold... Arctic Tundra all over. Yet full of life and inhabited.

Gosia: Wow, fascinating. What is the fourth one? Temmer, Erra, Dakotee, and?

Swaruu: The name is controversial. Procyon. It's controversial because it sounds like Proceon the star. Nothing to do with it. We must be clear with this, it sounds alike but it has nothing to do with our planet. It must be remembered that all these names, Erra, Temmer etc. are just the best sounding word to describe how it is in Taygetean language. I noticed some people say that Temmer, for example, means ¨Temer¨ - Spanish for ¨To fear¨. That's ridiculous. In french it would mean T'Meer Of "Land of the sea!¨ It will mean something else to other languages.

Gosia: Yes, it is obvious. Is Erra really like a twin planet of Earth, I think you said that before?

Swaruu: Very similar yes, but it has no deserts. And it's colder than Earth.

Gosia: Oh no! I love them! The deserts.

Swaruu: Temmer has plenty of deserts. It's more of a marine paradise planet. Erra is mostly forest. And Temmer has no winter time, only spring, summer-autumn and then spring again.

Gosia: Interesting! So no snow.

Swaruu: Temmer snow? Haha no never. Erra does and it gets as low as 40 or 50° below, some places as far down as 80°. And it gets snow and a lot! But it is ok in spring and summer. Very green all over. It's like 80% forest covered.

Gosia: How big are you'r planets? Like ours?

Swaruu: Erra is like 10% smaller than Earth. Temmer like 8% smaller, almost the same. And they pull at 80% gravity or .8 g.

Gosia: So is it lighter to walk?

Swaruu: Yes it is. Of course it´s normal for us. You only notice something different when you walk on Earth. You feel so heavy, like when you get out of a pool of water having been in it swimming for a long time. Gravity in the ships is also set to a comfortable 8% compared to earth. For us is simply the right setting.

Gosia: Do you have cities on those planets?

Swaruu: Erra during the day time looks very much like Earth. Erra / Terra --> twin of Erra. And yes, we have cities. Largest city is in the island "Toleka City" (translating it) in Temmer. But mostly small towns all over. We are not that many people. Total population of 38 million in 4 planets. We do have some big cities but they are rare. Less than 10 of them in all the planets. The capital city Toleka City is the largest with close to 700.000, it's in the main island Toleka in Temmer. Toleka city is very extensive, not like Earth ones.

This means with a lot of wild places in-between the buildings and a lot of open spaces. And it's never congested. It´s where the arts, music and most social life occurs. And it's by the sea side and it's also a harbor or port for both space ships and sea ships, as Temmer is a sea planet that only has islands and no continents.

The biggest island is Toleka and it's about the size of New Zealand. Toleka island is also where there is the largest industrial complex systems or factories, all underground. And they are 100% eco-friendly using only Zero Point Energy. Part of those industries (above ground) is the manufacturing of STARSHIPS, big and small, and people work on them because they love to!

They are creative, they see their work as art and with that they are also helping the whole society. Even large ships are built there, and then floated to orbit. There is a large complex of spaceports there. With installations to hold and dock-in large kilometer long Starships. Repair them and build them.

Taygetans live is small communities spread along the planets. Many small ones separated by several hundreds of kilometers, if not thousands. This is because transportation is not a problem and the towns are set in places where they have a minimum impact on nature. So that's the main factor for the location of each town.
Now the towns rarely go over 5000 people and they are communicated by rail (train) MAGLEV that's magnetic, no wheels, and elevated from the ground not to disrupt wildlife. The cars are usually transparent on top so you can see outside with full view. And they are full of sensors and a dispersion system in front to frighten off wildlife when the train is approaching to minimize accidents.

Gosia: So you travel by train. I thought everyone had their own ships, you told me about that some time ago?

Swaruu: Yes, by train and by air. Yes, everyone has their own ship that is like a car to you.
But as far as public transportation goes, the trains are the most used. We also have wheeled vehicles for short distances, mostly like delivery vans, and we do have scooters and motorcycles. But they are all electric and they get their energy from the air so they never run out.

Gosia: Bicycles?

Swaruu: No, not like the ones you imagine. The bearings in the wheels is magnetic so there is no friction, neither is there any inside the engines. So they last a very long time.

Gosia: I am looking for a place to rent right now. You think I can rent something in Erra?

Swaruu: Rent in Erra? No money needed in Erra!

Gosia: I wouldn´t have to do anything to get an apartment then?

Swaruu: You get your house built as you like it exactly and for free, just because!

Gosia: Hahaha just because, I like that!

Swaruu: Yes, just pick a spot that's not bothering anyone, animals plants or people.

Gosia: Who will build it for me? I cant build!

Swaruu: The community will go and build your house to your specifications! They do it because that's how it's done, and because they also got their houses built for them.

Gosia: But then I need to go and do something in exchange no? And what if someone doesn´t want to! (just asking to see how it works)

Swaruu: At the beginning of the civilization you did do things in exchange, not any more, you give because you want to give, and if you have something to give. The idea of scarcity or lack is Earth programming, on Temmer and on Erra there is abundance of everything. Everyone has what they need or want! No one fights there, what for? And the jobs no one wants like taking out the garbage, that's automated!

Gosia: But what if someone doesn´t want to contribute anything, just stay on the beach all day. Give nothing. So how would that work out?

Swaruu: Don't know how to answer. I haven't seen that happen. Everyone contributes just doing what they love to do. Sit on a beach all day... It's seen as something transitory and something that person needs. No one is like that, and all are sometimes, they are respected all the same. Sooner or later, that person will want to do something else, and like it or not they do contribute.

There isn't much to do anyway, it's all taken cared for. There is complete abundance of resources, and a lot of space for all. So everyone is exactly where each one wants to be and is doing exactly what they want to do. And in doing so, they are also helping and contributing to the overall society. And the things no one wants, like taking out the trash, it is all automated, robots and automatic computerized systems take care of those things. Same as the distribution of goods and services. The farms, many are automated, but most are still old fashion farms, people working the fields, because they like to and because they feel they are of service that way.

And you must understand that living in a place like Taygeta you have a help mind set. And another higher ethical values. You are comparing, and / or bringing the Earth mentality to Taygeta and it's simply not there. A Holographic society is not based on a political system "imposed" on the people. It's an individual mind set of every one living there. For example no one has lack mentality. There is abundance, people don't steal as they have everything they will ever want.

Gosia: And what if someone wants to take 5 boxes of bananas instead of 1? Can they? Or is it like a communist system where everyone is entitled to the same quantity?

Swaruu: They can, but what would they do with 5 boxes of banana? They will only rot and spoil and they would have a problem getting rid of them. You only take what you need as you cannot re-sell. And there is always a banana supply.

Gosia: Ok. Or if someone wants 10 dresses instead of 2. Because they like to change twice a day.

Swaruu: You can! No problem. There is no scarcity!

Gosia: Wow, cool, sounds like a dream. Let´s change a subject a little. What are your houses like? Are they like ours?

Swaruu: I see your apartments and houses as unusually square, and usually small but I do understand why as money limits everything. Everything here is rounded and large. Only inside a ship the rooms may take a more squared shape this because of logistics, even in big ships.

Gosia: Wow, places round and large, I would love that! I feel so in love with round type of architecture!

Swaruu: I have been looking, and on your Internet almost nothing resembles a TP house interior. Maybe like this?

Gosia: Wow! These are my dream designs.

Swaruu: Looks very much like a typical Taygetan Temmerian house. Only ours are a lot bigger and even more rounded.

Gosia: Yes awesome! These are my favorite designs. I always say to people: why do people only design square houses! This is absurd and so boring.

Swaruu: Taygetan houses are so big inside that they may have several levels and nature inside as interior gardens with a waterfall. You need the waterfall to purify your air, to ionize it. And you pass through little bridges with running water under them on your way to the kitchen. You water is always running, no "tap" water. You bathe in the little pool inside your bathroom.

Gosia: Are you saying that it's good to have a fountain for example inside the house? Its good for the air?

Swaruu: Yes it's good to have a fountain and running water inside. Water is not meant to be kept prisoner. It's meant to be free, it has a consciousness of its own. The only problem with having a waterfall or a fountain inside is that it will increase the humidity inside your house and it may be too much but that depends on your area, where you live.

If in Sedona AZ then it's ok. If you are in Seattle WA then no, it's too much and it may help rot a lot of your things that are humidity sensitive. Some places may be so dry that a water fall or a fountain inside will make the houses more livable, make it easier to breathe and fresher.

Gosia: Ok, now on the topic of religion. Very fast as I think we already have the answer: In your planets then, you have absolutely no existence of the so called religions right? You have spirituality, meditation etc. but

nothing else?

Swaruu: No existence at all. Only Spirituality. Religion is a control structure imposed upon the population of Earth only.

Gosia: Perfect. Now a little bit about travel. How far can you travel really with your ships? And do you travel for pleasure, as in going on vacation or is it only in expeditions for ¨work¨?

Swaruu: Ships: We can go anywhere and we have. Personal small ships are exactly like your cars. We use them for every possible reason. And there are many many models of ships, one for each need. Many are also designed by the owners as art or for special needs.

Gosia: But do you travel for pleasure? As in: let's go for vacation!

Swaruu: Yes, and a lot.

Gosia: Do you visit other cultures and do they visit yours?

Swaruu: Yes we do.

Gosia: What is a favourite travel destination for Pleiadians?

Swaruu: The most used place to visit is Temmer and its beaches.

Gosia: Ok, but what other planets and cultures do Pleiadians visit the most?

Swaruu: Engans are the closest, and it´s a very exotic and rich culture.

Gosia: But I mean outside of Pleiades? DO you visit other races and planets? Do they come too?

Swaruu: The most traffic is between our two cultures. Also because we look very much alike and we are very close friends. Too bad we cannot reproduce as a species among Engans and Taygetans. And other species come to visit too but the species that don't look very anthropomorphic tend to stay away.

Gosia: I see! And you don´t visit them either? I would! It would be fun!

Swaruu: That's a very widely observed tendency.

Gosia: Why is that??

Swaruu: They do visit but it's uncommon. Races communicate and even cooperate, but they hardly mix. Not like in the Star Trek or Star Wars movies, where they all mix the races.That's not so.

Gosia: But it´s possible if someone wants to, no?

Swaruu: The problem is that they are different because their bodies work differently and need different things. They are not different only externally, so it's not easy to coexist. And some can, like the Cats, the Urmah... they breathe the same air as we do so we mix very well and a lot. Even the food is similar. But that's rare. The Arcturians, for example, need a lot more oxygen than we do, so they cannot breathe in our atmosphere.

Gosia: Quite interesting. I thought there was more mutual exploration. And I´m not just talking about exploring other races, but other far away planets, the scenery etc.

Swaruu: Yes, we interact a lot, using hologram technology with virtual presence. That's how they can be with one another.

Gosia: But thats not the same! I would love to go to the distant planet and touch the rock, see the terrain formation etc. Go to unmapped places.

Swaruu: We do that. Taygeteans are the explorer race. We go to far away planets, and we have exploration teams and ships. The exo archaeologists for example. But, unfortunately those have a very high death rate. Many ships never return as they encounter the unknown.
